CASE STUDY

Innovative Patrol Solutions: Warren Police Deploy Electric Trikkes

SCAN ME

CUSTOMER

Warren Police Department – Warren, MI

CHALLENGES

Warren PD wanted to modernize patrols, improve efficiency in crowded areas, and strengthen community engagement. Traditional patrol cars, foot, and bike patrols faced limits in pedestrian zones, parks, and during events, making rapid response and approachable policing difficult.

SOLUTION

Using grant funding from the 2023 Coronavirus State and Local Fiscal Recovery Fund, Warren PD deployed four Trikke Positron 72V XL electric scooters. Quick deployment for events and neighborhood patrols. The Trikkes let officers access areas vehicles can't, maintain visibility, and engage the community effectively.

Trikke Positron scooters give Warren Police officers the ability to move quickly through pedestrian-heavy areas, increasing visibility and community interaction while maintaining rapid response capability.

Background

The Warren Police Department serves a large suburban community with active neighborhoods, parks, and frequent public events. The department prioritizes visible patrols, rapid response, and strong community relationships.

Challenges

Traditional patrol cars, foot patrols, and bicycles face limitations in pedestrian zones, parks, and during community events. These constraints make it harder to move quickly, remain visible, and engage residents consistently.

Solution

Warren PD deployed Trikke Positron electric patrol scooters to enhance mobility in areas where vehicles are restricted. The scooters provide a compact, quiet, and highly visible patrol option that supports both enforcement and community engagement.

Results

Officers can navigate crowded and hard-to-reach areas more efficiently while increasing face-to-face interaction with residents. The electric scooters offer quiet operation, easy storage, and tactical capability with lights and sirens for rapid response.

Conclusion

By adding Trikke Positron scooters to its fleet, Warren Police Department improved patrol coverage, visibility, and community connection. The deployment highlights a modern approach to policing that bridges the gap between foot patrol engagement and vehicle-based response.
