CUSTOMER

Denver Health Paramedics – Denver International Airport

CHALLENGES

Provide rapid emergency medical response across a massive airport environment with crowded terminals, long concourses, and multi-level parking structures.

SOLUTION

Deploy Trikke Positron 72V Elite units equipped with custom mounts to carry advanced life support equipment in order to:

- Improve emergency response times across the airport
- Navigate crowded terminals and narrow corridors
- Carry oxygen, a cardiac monitor/defibrillator, and medical bags
- Access elevators, parking garages, and pedestrian pathways

Background

Denver Health Paramedics provide emergency medical response at Denver International Airport, one of the largest and busiest airports in the United States. The size of the airport, combined with heavy passenger traffic, requires paramedics to move quickly across terminals, concourses, roadways, and parking garages.

Solution

Denver International Airport first deployed Trikke Positron 72V Elite units for airport police, followed by additional units for paramedics. Trikke Professional Mobility developed custom brackets allowing paramedics to securely carry oxygen tanks and advanced life support equipment without affecting vehicle performance or maneuverability. Trikke also provided on-site training during deployment.

Results

"The Trikke capably carries all our equipment which allows our airport paramedics to provide the same level of care they would receive if an ambulance would respond," said Denver Health Paramedic Lieutenant Tom Stoffer. "Even with this load carrying ability, the Trikke is very nimble allowing us to effectively navigate through the facility with ease."

Conclusion

For large, complex environments like Denver International Airport, rapid mobility is essential for emergency response teams. The Trikke Positron allows paramedics to carry critical medical equipment while navigating crowded indoor and outdoor areas quickly and efficiently. By improving mobility and response capability across the airport, the Trikke has become an important tool for Denver Health Paramedics' emergency response operations.
